Research

Research areas: Experimental and behavioral economics; Experimental methodology; Metascience

Open Science, Closed Peer Review? (2025) – Conditionally accepted, *JESA*

with Gary Charness, Anna Dreber, Adam Gill, and Séverine Toussaert [Link]

Summary: We explore transparency reforms that could improve performance and decision quality in peer review by (i) modifying the identifiability of stakeholders and (ii) establishing channels for the open communication of information.

Improving Peer Review in Economics: Stocktaking and Proposals (2022)

with Gary Charness, Anna Dreber, Adam Gill, and Séverine Toussaert [Link]

Coverage: *VoxEU* [Link], *World Bank Blogs* [Link]

Summary: We leverage a survey of economists, observational data, and a literature review to (i) document the current state of peer review in economics and (ii) investigate concrete steps towards improving it.

Works in Progress

Evaluating and Improving Experiments – Manuscript drafting stage

with Luca Henkel, Brian Jabarian, and John List

Summary: We introduce a comprehensive method for evaluating the design of experiments and use it to document the current state of experimental design in economics. We also explore potential trade-offs between design features.

Predicting Social Science Results – Manuscript drafting stage

with Taisuke Imai and Séverine Toussaert

Summary: We leverage a meta-analysis to investigate the practice of collecting forecasts of research results. We conceptualize and measure the returns to this practice and assess the accuracy of forecasts relative to actual study results.
